

## NOMENCLATURE

### Dimensional quantities

$a$	rate of gravitational settling of solid (liquid) particles; sound velocity, m/s; thermal diffusivity of gas, $\text{m}^2/\text{s}$
$A$	region (zone) surface area, $\text{m}^2$
$c_p$	isobaric heat capacity of gas, $\text{J}/\text{kg}\cdot\text{K}$
$c_v$	isochoric heat capacity of gas, $\text{J}/\text{kg}\cdot\text{K}$
$d$	diameter of the streamlined body, m
$f_1$	first Coriolis parameter, $\text{s}^{-1}$
$f_2$	second Coriolis parameter, $\text{s}^{-1}$
$\vec{F}$	vector of the total mass force, N
$\vec{F}_c$	Coriolis force vector, N
$F_x$ $F_y$ $F_z$	projections of the vector of the total mass force in the Cartesian system of coordinates, N
$g$	acceleration of gravity, $\text{m}/\text{s}^2$
$h$	typical vertical size; model screen height; protected facility height, m
$h_1$	mesh structure height, m
$h_2$	height of the surface flow generating a vortex, m
$H$	vortex height, m
$l$	laboratory vortex height, m
$l_1$	fixed barrier height, m
$l_2$	mesh barrier height, m
$l_c$	Coriolis circle length, m
$L$	space scale, tornado height, m
$L_k$	propagation path length of the $k$ intensity tornado, m
$m$	material point mass, kg
$p$	gas pressure, Pa
$R$	the Earth radius, m; the universal gas constant, $\text{J}/(\text{kg}\cdot\text{K})$

## NOMENCLATURE

$R_c$	Coriolis circle radius, m
$r, \phi, z$	radial, azimuthal (tangential), and axial coordinates in the cylindrical system of coordinates, m, rad., m
$S$	entropy, J/K; total damage area, $\text{m}^2$
$T$	temperature of gas and underlying surface, K; effective period of observations, s
$T_a$	air temperature over the underlying surface, K
$T_c$	temperature at the center of the underlying surface, K
$U$	forward velocity of tornado, m/s
$U_k$	forward velocity of the $k$ intensity tornado, m/s
$U_p$	forward velocity of the probable tornado, m/s
$U$	gas velocity vector, m/s
$U_r, U_\phi, U_z$	projections of the gas velocity vector in the cylindrical system of coordinates, m/s
$U_x, U_y, U_z$	projections of the gas velocity vector in the Cartesian system of coordinates, m/s
$V$	rotational velocity of the tornado funnel wall, m/s
$V_k$	rotational velocity of the $k$ intensity tornado funnel wall, m/s
$V_p$	rotational velocity of the probable tornado funnel wall, m/s
$\vec{V}$	vector of material particle velocity, m/s
$V_x, V_y, V_z$	vector of material particle velocity projection in the Cartesian system of coordinates, m/s
$W_k$	propagation path width of the $k$ intensity tornado, m
$x, y, z$	longitudinal, lateral, and vertical coordinates in the Cartesian system of coordinates, m

### Greek symbols

$\beta$	coefficient of volumetric expansion, $\text{K}^{-1}$
$\Gamma$	circulation, $\text{m}^2/\text{s}$ ; temperature gradient, $\text{K}/\text{m}$
$\Delta p_p$	pressure difference between the center of the funnel and the periphery of the probable tornado, Pa
$\mu$	coefficient of dynamic viscosity, $\text{N}\cdot\text{s}/\text{m}^2$
$\nu$	kinematic viscosity coefficient, $\text{m}^2/\text{s}$
$\rho$	gas density, $\text{kg}/\text{m}^3$
$\rho_p$	density of solid (liquid) particles, $\text{kg}/\text{m}^3$
$\phi$	geographical latitude, rad.
$\tau$	time, s

## TORNADO

$\tau_c$	time of cooling of the underlying surface; time of motion along the Coriolis circle, s
$\tau_h$	time of heating of the underlying surface, s
$\Psi$	stream function, $\text{m}^3/\text{s}$
$\vec{\omega}$	gas vorticity vector, $\text{s}^{-1}$
$\omega_r, \omega_\phi, \omega_z$	projection of the gas vorticity vector in the cylindrical system of coordinates, $\text{s}^{-1}$
$\omega_x, \omega_y, \omega_z$	projection of the gas vorticity vector in the Cartesian system of coordinates, $\text{s}^{-1}$
$\Omega$	vector magnitude of the angular velocity; angular rotational velocity of the Earth, $\text{s}^{-1}$
$\vec{\Omega}$	vector of angular rotational velocity, $\text{s}^{-1}$
$\Omega_x, \Omega_y, \Omega_z$	projections of the angular velocity vector in the Cartesian system of coordinates, $\text{s}^{-1}$

### Dimensionless quantities

$a$	ratio of the actual number of tornados to the recorded number
$k$	adiabatic index; tornado intensity class
$k_p$	calculated intensity class of probable tornado
$m_k$	the highest class of recorded tornados of the class in the area
$n$	polytropic index; number of tornados recorded in the area
$n_k$	number of tornados recorded in the area, class $k$
$N$	total number of tornados crossing the area
$P$	annual probability of a tornado of the specific intensity class
$P_0$	annual probability of a tornado-like event
$P_s$	annual probability of a tornado-like event in the area
$\text{Ra}$	Rayleigh number
$\text{Re}_d$	Reynolds number for flow past a body
$\text{Re}_r$	radial Reynolds number
$\text{Re}_\phi$	vortex Reynolds number
$\text{Ro}$	Rossby number
$S$	parameter of twisting

### Greek symbols

$\Phi$	volume concentration of solid (liquid) particles
$\psi$	stream function

## NOMENCLATURE

### Subscripts

$\infty$	value at infinity
0	value at the initial instant of time; on the ground surface; on the core boundary
$c$	value at the center of the underlying surface
$f$	value on the funnel surface
$k$	value for the $k$ intensity tornado
max	maximum value
min	minimum value
$p$	value for the probable tornado.
