

Index

A

- Activation of nucleation centers on real surfaces 212, 223
- Actual contact area 38, 39
- Additional flow turbulization on heat transfer surfaces 56
- Adhesive formation of nuclei 179
- Adsorption layers on the surface 27
- Adsorption potential 27, 282
- Annular channel 126, 137, 152
- Annular turbulizers 162, 251
- Artificial turbulization 117, 251

B

- Binodal 166
- Boiling region on real surfaces 230
- Bubble generation 185
- Bubble growth 195, 200

C

- Capillary 166
- Characteristics of the coating on heat transfer surfaces 30
- Characteristics of the efficiency of heat transfer surfaces:
 - in boiling heat transfer 224
 - in single-phase convection 78
 - in thermal radiation 284
 - in vapor condensation 245
- Chemical potential 49, 175
- Chemisorption 27, 46
- Chemistry of surfaces 28
- Coated fins 301
- Coated surfaces 30
- Cocurrent flow 4

Coefficient:

- drag 84, 97, 119
- of heat transfer 2
- of roughness 20

Combined coatings 32

Condensation 247

Condensers 347

Conditions for efficient heat transfer surface design 322

Conduction 226

Contact angle 40

Convection 51

Correlograms of surfaces 24

Countercurrent flow 4

Critical radius of nuclei 181

Critical state 179

Cross flow 4

D

Depth of knurling 136

Developed surfaces 7

Diaphragms 111

Dimensionless depth of knurling 127

Dimensionless numbers:

- Archimedes number 200
- Boltzmann number 318
- Froude number 61
- Grashof number 170
- Jakob number 198, 227
- Knudsen number 197
- Marangoni number 173
- Nusselt number 76, 227, 236, 256
- Peclet number 228

- Phase change number 227
- Prandtl number 77, 99, 170, 227
- Rayleigh number 170, 236
- Reynolds number 88, 256

Dimensions of grooves 54

Disappearance of nuclei 184

E

Efficiency:

- of heat transfer 4
- of fins 11

Efficient surfaces:

- for boiling heat transfer 164
- for single-phase convection 51
- for thermal radiation 293
- for vapor condensation 247

Emissivity of materials 273

Enhancement of heat transfer:

- in annular channels 150
- in boiling 231
- in condensation 247
- in transverse flow 162
- in triangular channels 157
- in tubes 77
- in tube bundles 147
- on flat surfaces 157

Estimation of the heat transfer enhancement for real surfaces 231, 321

Evaporation 223, 345

F

Film condensation 255

Fins:

- characteristics 9
- longitudinal 11, 304
- optimum 13
- radiating 307

Flat surface 157

Flow turbulization 56, 162

Formation and structure of real heat transfer surfaces 22

Forced convection 77

Frequency of bubble generation 226

G

General recommendations for selection of a method 333

Gibbs equation 42

Gibbs function or the Gibbs free energy 179

Growth of bubbles on real surfaces 195

H

Heat transfer enhancement:

- in annular channels 126
- in boiling on real surfaces 214
- in condensation 215
- in cross flow past annular turbulizer-equipped tube bundles 163
- in flat and triangular channels 157
- in fouling on tube surfaces 162
- in in-line tube bundles 126
- in straight channels 73
- in tubes 77

Heat transfer enhancement in condensation:

- of the vapor-air mixture on horizontal tubes 268
- of the vapor-air mixture on vertical tubes 267

- of vapor mixtures on vertical tubes 262
- on horizontal tubes with annular grooves 249
- on vertical tubes with annular grooves 254

Heat transfer from a solid surface to liquid 51

Heat transfer in nucleation centers on real surfaces 226

Homogeneous formation of nuclei 179

Hydraulic resistance 118

Hydrocarbons 120, 232

I

Influence of a wall temperature 126

Instability 172

Interactions between surfaces 39

Interactions of radiation with real surfaces 281

Interphase transition region 48

K

Knurling 109

L

Laminar flow 128

Langmuir equation 42

Liquid stability 168

Liquid metals 45, 236

Longitudinal flow past tube bundles 126

M

Macrostructure of heat transfer surfaces 6

Mechanical treated surfaces 6

Metastable states 166

Methods:

- of choosing efficient heat transfer surfaces 51
- of heat transfer enhancement 51, 69

Methods of calculation and design of efficient heat transfer surfaces:

- for boiling heat transfer 164
- for single-phase convection 73
- for thermal radiation 270
- for vapor condensation 245

Microstructure of heat transfer surfaces 14

Models of nucleation on real surfaces 191

Multilayer materials 34

Multipass flow 4

N

Natural convection 69

Nucleate boiling 231

Nucleation on real heat transfer surfaces 164, 178

Nucleus of vapor 191

Number of nucleation centers on real surfaces 217

O

Optimal depth of knurling 136, 141

Optimization

- of design 345
- of nuclei 175

P

Painted surfaces 31

Phase interface 46

Porosity 33

Porous media 32

Pressure drop 339
Profile of a turbulizer 105
Properties of surfaces 192

R

Radiation 270
Real interphase transition region 39, 190
Reflection 282
Rectangular fin 304
Resistance coefficient 59
Requirements for efficient heat transfer surfaces:
– in boiling heat transfer 229
– in single-phase convection 56
– in thermal radiation 319
– in vapor condensation 265
Roughness 17, 23

S

Saturation 190
Screens 290, 308
Selection of a method for heat transfer enhancement 333
Separation zone 56
Single-phase convective heat transfer 69
Smooth surface 2
Spinodal 166
Structure of a surface 22
Subcooling 185
Surface finning 2, 161
Surface treatment 17
Surfaces:
-- for boiling heat transfer 309

- for single-phase convection 73
- for thermal radiation 319
- for vapor condensation 219

T

- Technology of surface treatment 26
- Temperature profile 90, 185
- Thermal contact resistance 34
- Thermal efficiency 8
