INDEX

A
Absorber tower, 471
Accelerating cavity, 377
Acceleration flow, 123
Active zone channel, 478
Active zone, 315
Additional controlling hydraulic resistance, 154
Adiabatic process, 494
Aggressive effect, 381
Algebraic equation, 175
Amplitude gradient, 288
Angle of attack, 440
Angle of installation, 536
Angle of rotation, 259
Angle of sedimentation, 270
Angle of slope, 181
Angle of wetting, 5
Annular channel, 109
Annular groove, 11
Annular knurling, 157
Annular protrusion, 22
Archimedes number, 431
Archimedian force, 431
Artificial Earth satellite, 471
Artificial roughness, 3
Artificial turbulization, 1
Ascending rectilinear flow, 212
Asperity radius, 8
Atomic engineering, 429
Automated system, 303
Azimuthal distribution, 357
Azimuthal velocity component, 26
INDEX

B
Balance relation, 173
Basset force, 458
Bifurcation process, 276
Binary vapor mixture, 47
Blasius law, 17
Blasius relation, 61
Boiling crisis, 377
Boiling curve, 386
Boiling heat transfer, 94
Boiling number, 66
Boiling on a sphere, 408
Boiling regime, 377
Boiling surface, 98
Boiling with subcooling, 395
Boundary conditions, 102
Boundary-layer thickness, 2
Branch pipe, 155
Breeding medium, 490
Brush structure, 324
Bubble boiling, 94
Bubbling apparatus, 275
Bubbling reactor, 429
Bulk heat transfer, 298
Bundle diameter, 105
Bundle of nuclear rockets, 477
Bundle of smooth pipes, 18
Bundle of spiral fuel elements, 361
Bundle of twisted fuel elements, 101
Bundle of twisted rods, 101
Bundle of twisted tubes, 101
Bush-like structure, 328

C
Capillary structure, 377
Capillary-porous structure, 376
Carrying capacity of the distributor, 447
Carrying medium, 429
Cartesian coordinate system, 242
Centrifugal apparatus, 170
Centrifugal inertia force, 430
Centrifugal separation, 430
Channel of complex shape, 101
Channel of rectilinear cross section, 324
Channel with additional artificial turbulization, 482
Channel with intensifiers, 482
Channel with porous heat-conducting inserts, 515
Channel without finning, 314
Chaotic analysis, 98
Chaotic attractor, 288
Chaotic oscillations, 276
Chaotic process, 94
Chaotic regime, 287
Chemicotechnological facilities, 275
Circuit fluctuations, 1
Circuit for gas-turbine transformation of heat, 472
Circuit for removing heat from the nuclear power plant, 472
Circular channel, 312
Circular pipe, 84
Classical relation, 62
Closed loop with turbomachine cycle, 106
Closed power circuit, 141
Closing the systems of equations, 303
Coalescence process, 429
Coefficient of hydraulic resistance, 12
Coefficient of mixing, 104
Coherent mass transfer conditions, 190
Coherent structure, 189
Coiled pipe, 80
Column apparatus, 226
Column diameter, 441
Combined method, 399
Commercially smooth surface, 10
Compact nuclear reactor, 106
Comparative analysis, 89
Computation technique, 135
Computational method, 104
Computational-experimental method, 354
Computer time expenditure, 136
Concentration gradient, 229
Condensation of aggressive and radioactive vapors, 518
Condensation of escaping flue gases, 535
Condensation process, 429
Conditions of azimuthal nonuniformity, 358
Conditions of flow twisting, 338
Conditions of forced motion, 377
Conditions of heat loads, 377
Conditions of heat removal, 321
Conditions of hydrodynamic stabilization, 360
Conditions of liquid subcooling, 410
Conditions of nonuniform heat release, 514
Conditions of nuclear critical state, 518
Conditions of safe operation, 357
Conical coordinate system, 250
Conicity angle, 463
Consistency of sediment coefficient, 180
Constant-temperature thermoanemometer, 303
Constant-width channel, 363
Constrained space conditions, 303
Construction of a bundle of twisted pipes, 304
Construction of a qualitative model, 158
Construction of cooled equipment, 298
Construction of fuel assembly, 502
Construction of fuel elements, 478
Construction of hydrocyclone, 537
Construction of nuclear power propulsion plant, 476
Construction of reactors-lasers, 518
Construction of settler, 538
Construction of test section, 305
Construction of thermoanemometric probes, 303
Contact condensation, 533
Contact surface, 192
Continuity equation, 24
Continuity relation, 244
Continuous medium, 205
Convective exchange, 337
Convective heat transfer, 18
Convergent channel, 313
Cooled element, 321
Cooler-emitter, 471
Cooling channel, 481
Cooling facilities, 523
Cooling medium, 155
Cooling process, 147
Cooling surface, 321
Cooling system, 68
Coordinate surface, 237
Corrugated structure, 377
Countercurrent heat exchanger, 156
Countercurrent zone, 461
Critical analysis, 458
Critical diameter, 389
Critical heat flux, 414
Critical section, 494
Cross flow, 361
Current supplying pipe, 310
Curvature radius, 31
Curvature roughness, 55
Curvilinear channel, 83
Curvilinear surface, 25
Cyclone diameter, 433
Cyclone process, 430
Cylindrical channel, 125
Cylindrical coordinate system, 335
Cylindrical surface, 384

D
Data-processing method, 342
Deep dimple, 22
Densely packed bundle, 85
Density reactivity, 103
Deposition angle, 270
Deposition of droplets, 431
Deposition of scale, 14
Design point, 125
Desorption of oxygen, 199
Detachment diameter, 60
Determination of the characteristic parameters of nuclear power propulsion plant, 480
Deterministic chaos, 422
Developed boiling, 395
Diameter of a dimple, 26
Diameter of a droplet of mean mass, 437
Diameter of a pitch, 404
Diameter of depression, 70
Diameter of heat carrier passage, 501
Diameter of the active zone, 484
Diameter of the diffusion source, 304
Differently shaped protrusion, 88
Diffusion source, 358
Diffusion term, 101
Diffusional process, 216
Dimensionless complex, 45
Dimensionless equation, 150
Dimensionless relation, 149
Dimensionless thickness, 2
Dimpled surface, 13
Discrete turbulization, 158
Dismountable apparatus, 525
Disperse medium, 236
Disperse mixture, 232
Disperse regime, 63
Dissipative structure, 289
Distribution of density, 184
Distribution of energy, 283
Distribution of enthalpies, 111
Distribution of heat flux density, 236
Distribution of mean energy release, 486
Distribution of particles, 50
Distribution of pressures, 108
Distribution of relative Nusselt numbers, 35
Distribution of temperatures, 506
Distribution of velocity components, 105
Disturbances of the parameters, 102
Double-curvature roughness, 56
Double-pipe-type heat exchanger, 24
Drum-type control system, 108
Dynamic system, 456
Dynamic chaos, 276

E

Economic effect, 464
Eddy exchange, 342
Effect of homogenization bundle porosity, 101
Effect of isotropic and homogeneous viscosity, 459
Effective diameter, 216
Effective medium, 245
Effective porosity, 51
Effective thickness, 333
Efficiency of cyclone elements in tray apparatuses, 439
Efficient heat exchanger, 41
Electric circuit, 507
Electric power, 471
Electrically heated model, 500
Electrodiffusional method, 463
Electroinsulating coating, 310
Electrojet engine, 473
Electrophysical facilities, 516
Empirical relation, 3
Energy conditions, 141
Energy conservation equation, 219
Energy consumption, 471
Energy equation, 101
Energy exchange, 215
Energy losses, 3
Energy regime, 476
Energy release, 87
Energy spectrum, 338
Enhancement of cooling and of thermostating of laser mirrors, 515
Enhancement of heat removal, 316
Enhancement of heat transfer, 11
Entry section, 1
Equation of convective diffusion, 183
Equation of convective heat transfer, 322
Equation of motion, 103
Equation of state, 103
Equivalent diameter, 45
Eulerian coordinate system, 258
Eutectics medium, 383
Evaporation process, 429
Evaporative regime, 377
Evaporator and heat exchanger for heat supply, 523
Evaporator-condenser, 60
Evolution of dynamic systems with "white noise", 456
Exchange of portions of liquid, 105
Exit section, 485
Expenditure of energy, 177
Experimental conditions, 385
Experimental distribution, 350
Experimental facilities, 303
Experimental method, 303
Experimental point, 62
Experimental section, 29
External conditions, 23
External mass force, 459

Facilities for investigating the intensification of heat transfer, 314
Facilities for obtaining condensate, 532
Field conditions, 356
Field of heat removal, 303
Film boiling, 93
Film flow, 206
Film surface, 174
Film thickness, 191
Filtering apparatus, 236
Filtration process, 240
Filtration rate, 322
Finely dispersed structure, 24
Fine-scale oscillations, 207
Fine-scale vortex, 24
Finished surface, 412
Finite-difference relation, 125
Finned surface, 40
"Finning" effect, 329
Flow channel, 120
Flow in twisted pipes and annular channels, 365
Flow rate coefficient, 448
Flow rate equation, 139
Flow rate fluctuations, 1
Flow rate, 1
Flow separation conditions, 16
Flow structure, 16
Flow twisting, 4
Flow velocity vector, 101
Fluctuating velocity component, 339
Fluctuations of vapor film thickness, 93
Fluidized-bed apparatus, 429
Force of liquid resistance, 458
Force of molecular friction, 431
"Formal stochastic" construction, 457
Fourier spectrum, 94
Fraction of delayed neutrons, 139
Fraction of entrained liquid, 443
Fraction of heat, 297
Fraction of particles, 174
Fractional separation, 443
Free surface, 195
Frequency distribution, 338
Frequency spectrum, 303
Friction losses, 64
Frontal surface, 381
Froude number, 180
Fuel assembly bundle, 118
Fuel assembly with twisted fuel elements, 484
Fuel assembly, 88
Fuel element, 78
Full-scale model, 354

G
Gas dynamics equation, 103
Gas flow rate, 123
Gas turbine plant, 471
Gas–air mixture, 41
Gas-cooled reactor, 105
Gas–graphite mixture, 219
Gas–liquid mixture, 62
Gas-turbine engine, 21
Gear method, 252
Ginzburg–Landau model, 276
Görtler-type vortex, 24
Gravity losses, 478
Grid method, 125
Grooved surface, 377

H
Hagen–Poiseuille law, 371
Half-integer point, 135
Heat balance equation, 409
Heat carrier mass, 146
Heat carrier twisting, 4
Heat carrier, 1
Heat conduction equation, 124
Heat conversion to electric power, 106
Heat exchange, 132
Heat exchanger method, 314
Heat exchanger, 4
Heat exchanger-regenerator, 471
Heat-exchanging apparatus, 150
Heat-exchanging facilities, 348
Heat losses, 109
Heat power, 309
Heat release rate, 362
Heat releasing surface, 376
Heat removing system, 475
Heat source, 319
Heat transfer apparatus, 373
Heat transfer coefficient in bundles of twisted pipes, 344
Heat transfer coefficient, 1
Heat transfer conditions, 356
Heat transfer enhancement in pipes with knurling, 400
Heat transfer enhancement, 160
Heat transfer equation, 101
Heat transfer facilities, 275
Heat transfer inside twisted pipes and annular channels, 370
Heat transfer intensification, 1
Heat transfer intensifier, 157
Heat transfer intensity, 190
Heat transfer process, 35
Heat transfer rate, 3
Heat transfer surface, 13
Heated section, 487
Heating hydrodynamic efficiency, 6
Heating surface, 387
Heat-stressed structure, 297
Heat-transferring medium, 47
Helical channel, 335
Helical groove, 4
Helical pipe, 81
Helical protrusion, 3
Helically profiled pipe, 4
Helium–xenon mixture, 471
Hemispherical dimple, 14
Heterogeneous nuclear reactor, 102
Heterogeneous system, 429
Heterogeneous two-phase mixture, 237
Hewlett–Packard apparatus, 316
High turbulence intensity conditions, 303
High-temperature reactor, 106
High-voltage power source, 319
Homogeneous system, 459
Homogenized medium, 102
Horizontal channel, 319
Hydraulic channel, 119
Hydraulic diameter, 21
Hydraulic losses, 31
Hydraulic resistance inside twisted pipes and annular channels, 370
Hydraulic resistance of a cyclone, 446
Hydraulic resistance, 3
Hydrocyclone apparatus, 537
Hydrodynamic conditions, 195
Hydrodynamic regime, 204
Hydrodynamic resistance, 218
Hydromechanical process, 272
Hydromechanical separation, 456
Hydrophobic surface, 57
Hypothesis of local similarity, 104

I

Ideally smooth surface, 1
Idle regime, 379
Inclination angle, 292
Inclined surface, 263
Incoming jet, 381
Indicator gas, 304
Indirect method, 358
Induction field, 214
Influence of interchannel heat carrier mixing, 102
Initial conditions, 176
Initial diameter, 160
Initial equation, 104
Initial mass, 471
Initial roughness, 5
Initially smooth surface, 26
Inlet section, 31
In-line bundle, 18
Inner diameter, 5
Inner pipe, 309
Inner surface, 42
Inside diameter, 309
Inside surface, 523
Instantaneous flow pattern, 192
Instantaneous resistance, 458
Insulated channel, 501
Integral relation, 185
Integral thickness, 109
Intense exchange, 158
Intense process, 384
Intensification of heat transfer, 6
Intensification of interchannel mixing of a heat carrier, 348
Intensified separation, 429
Intensifier of macro-, micro-, and nanoscales, 47
Intensity of entrainment, 432
Intensity of filtration, 239
Intensity of flow turbulence, 148
Intensity of flow twisting, 105
Intensity of heat transfer, 367
Intensity of random actions, 460
Intensity of salt deposition, 157
Intensity of temperature fluctuations, 316
Intensity of the vortex motion, 337
Intensity of turbulent pulsations, 463
Intensity of velocity pulsations, 359
Interaction of the liquid film with a vapor flow, 449
Interaction zone, 327
Interplanetary flight, 473
Isolated channel, 106
Isothermal conditions, 201
Isothermal process, 201
Isotropic structure, 342
Iteration process, 136

J
Jet impingement, 1
Justification of the model, 303

K
Kandlikar relation, 65
Knurled groove, 7
Knurled pipe, 89
Kolmogorov–Fokker–Planck equation, 457
Kutateladze number, 201

L

Lagrangian coordinate system, 258
Lamé coefficient, 177
Laminar deposition, 431
Laminar regime, 25
Laminar-to-turbulent transition, 61
Langevin equation, 456
Large-scale model, 356
Large-scale turbulent oscillations, 207
Laser-active medium, 518
Law of constant circulation, 337
Law of heat transfer, 342
Law of quasisolid rotation, 337
Law of reactivity variation, 142
Law of resistance, 342
Least-squares method, 527
Lewis number, 104
Lifetime of one generation of neutrons, 167
Limits of channel wall cooling, 298
Limits of heat transfer intensification, 325
Linear equation, 125
Linear hydraulic resistance, 165
Linear law, 145
Linear source, 305
Liquid rocket engine, 473
Liquid–gas interface, 195
Local heat transfer, 298
Local hydraulic resistance, 124
Local losses, 117
Local resistance, 117
Local similarity method, 304
Local slip, 59
Logarithmically normal law, 443
Longitudinal distribution, 35
Longitudinal flow, 335
Longitudinal velocity component, 335
Longitudinal vortex, 16
Losses due to flow acceleration, 123
Losses of specific thrust pulse, 498
Lotus leaf, 55
Lyapunov attractor, 282

M
Mach number, 166
Mandelshtam method, 279
Manned Mars complex, 106
Marching method, 103
Markovian process, 456
Mars satellite, 473
Marsian landing apparatus, 473
Mass exchange, 166
Mass exchanger, 236
Mass exchanging apparatus, 189
Mass transfer apparatus, 429
Mass transfer enhancement, 101
Mass transfer intensification, 303
Mass transfer intensity, 189
Mass transfer process, 105
Mass transfer surface, 183
Mathematical model, 101
Maxwell equation, 215
Mean diameter, 153
Measurement and controlling system, 303
Measurement point, 5
Measuring and computing complex, 308
Medium separation, 176
Method of alternating directions, 103
Method of analysis, 105
Method of augmentation, 106
Method of constant-temperature thermoanemometer, 303
Method of equal surfaces, 223
Method of heat and mass transfer enhancement, 106
Method of heat diffusion, 304
Method of heat transfer intensification, 1
Method of integral relation, 185
Method of iterations, 109
Method of local modeling, 360
Method of mathematical statistics, 342
Method of matrix factorization, 102
Method of thermohydraulic design, 105
Method of thermostatic control, 380
Method of wave packets, 290
Method of zonal heating, 303
MHD generator, 429
Microlinear surface, 57
Microprofiled surface, 59
Mineral deposition, 157
Mirror surface, 29
Mobile diffusion source, 304
Model of Bromley, 421
Model of flow, 101
Model of homogenized medium, 101
Model of one-dimensional filtration, 240
Momentum conservation equation, 208
Momentum transfer equation, 189
Monochromatic regime, 275
Monotornado-like regime, 33
Motive force, 429
Multiphase heterogeneous medium, 170
Multirod bundle, 510

N
Natural conditions, 148
Navier–Stokes equation, 221
Neutron generator, 517
Neutron multiplying medium, 140
Neutron-physical process, 517
Newell–Whitehead–Segel model, 276
Newtonian rheological law, 249
Nominal regime, 496
Nonequilibrium process, 517
Nonlinear differential equation, 186
Nonlinear dispersing medium, 279
Nonlinear energy source, 277
Nonlinear process, 517
Nonstationary conditions, 106
Nonstationary distribution, 322
Nonstationary method, 408
Nonstationary process, 276
Nonstationary regime, 136
Nonuniform distribution, 45
Nonuniform field, 303
Normal distribution, 443
Normal law, 388
Normal Reynolds stress, 37
No-slip conditions, 24
Nuclear complex, 471
Nuclear jet engine, 356
Nuclear plant, 471
Nuclear power plant with gas-turbine cycle of transformation, 472
Nuclear power propulsion plant, 105
Nuclear reactor, 68
Nuclear rocket engine, 101
Number density of craters, 17
Number density of dimples, 17
Number of nucleation sites, 66
Numerical analysis, 285
Numerical method, 102
Numerical model, 63
Nusselt number, 4

O
One-parameter coating, 52
One-start knurling, 7
Operating conditions, 380
Operational regime, 379
Optoacoustic method, 95
Ordered vortex structure, 85
Ordinary partial differential equation, 173
Orthogonal coordinate system, 335
Oscillations of vapor bubble, 95
Outer channel, 134
Outer diameter, 5
Outer surface, 5
Outlet section, 31
Outside diameter, 313
Outside surface, 316

P
Parabolic equation, 125
Parallel channel, 107
Partial differential equation, 172
Peak-like disturbances, 254
Periodic structure, 322
Periodicity conditions, 130
Permeability coefficient, 180
Permeable coating, 52
Permeable surface, 172
Phase-change surface, 380
Phase interface oscillations, 331
Phase interface, 93
Physical model, 459
Pipe diameter, 400
Pipe with annular knurling, 165
Pipe with commercially smooth surface, 319
Pipe with ring diaphragms, 162
Pipe with sintered coating, 319
Pipe-in-pipe heat exchanger, 159
Pivot method, 249
Pivot relation, 247
Placing a cargo, 471
Plane channel, 151
Plate apparatus, 524
Plate-flow agitator, 533
Point source, 304
Polydisperisty of the discrete phase, 429
Polymer coating, 13
Pool boiling, 93
Porous coating, 4
Porous medium, 297
Porous structure, 69
Post-dryout region, 317
Power complex, 471
Power engineering, 537
Power expenditure, 21
Power generation, 471
Power generator, 309
Power law, 96
Power plant, 471
Power propulsion complex based on nuclear rocket engine, 473
Power propulsion plants of spacecraft for piloted expedition to Mars, 471
Power regime, 105
Power relation, 471
Power-law model, 170
Poynting vector, 215
Prandtl number, 10
Pre-dryout regime, 397
Preheated active zone, 145
Preliminary partial separation, 442
Pressure gradient, 101
Pressure losses, 40
Probability density distribution, 52
Process of boiling, 93
Process of deposition, 431
Process of destruction, 25
Process of equalization of nonuniformities, 354
Process of fission of uranium nuclei, 491
Process of fragmentation, 429
Process of interchannel mixing, 348
Process of separation, 429
Propulsion complex, 471
Propulsion conditions, 141
Propulsion plant, 471
Propulsion regime, 115
Protective coating, 501
Pulsational regime, 450
Pulsed regime, 518

Q

Qualitative model, 158
Quasihomogeneous model, 237
Quasilinear equation, 277
Quasistationary model, 139

R

Radial distribution, 68
Radial velocity component, 26
Radius of a protrusion, 4
Radius of a vapor bubble, 97
Radius of fuel assembly, 484
Radius of profile rounding, 5
Random effect, 462
Random Gaussian process, 93
Random oscillations, 276
Rarefaction zone, 430
Rate of heating, 478
Reactivity introduced by control elements, 143
Reactivity of nuclear power propulsion plant reactor, 143
Reactor active zone structure, 489
Reactor channel, 481
Reactor facilities, 357
Reactor radius, 482
Reattachment point, 2
Rectangular profile, 2
Rectangular protrusion, 2
Recticular structure, 328
Recurrent relation, 174
Reflecting surface, 516
Regime of deterministic chaos, 422
Regime of heat removal, 399
Regime of lowered power, 506
Regime of operation, 496
Regime of reactor cooling, 479
Regular regime, 518
Regular roughness, 1
Regular structure, 190
Regular-roughness surface, 206
Relative roughness, 1
Release of the spent heat, 471
Representative point, 456
Requirements of quick response and low inertia, 303
Reservoir-type cavity, 48
Residual heat release, 141
Reynolds analogy, 10
Reynolds number, 4
Rheological model, 175
Rocket fuel, 471
Rocket power engineering, 429
Rotary film apparatus, 170
Rough surface, 1
Round pipe, 105
Rounding-off radius, 31
Runge–Kutta method, 225

S
Safe regime, 354
Salt deposition, 157
Sand roughness, 4
Scalar equation, 263
Screw knurling, 4
Sea water desalination, 429
Second Kolmogorov equation, 457
Secondary circuit, 472
Sediment thickness, 181
Selection of construction and materials, 500
Self-cleaning of porous coating, 5
Self-cleaning surface, 4
Self-organization of tornado-like jets, 24
Self-organization of vortex structures, 25
Self-organized regime, 276
Self-organizing structure, 189
Semi-empirical relation, 3
Semipermeable coating, 52
Separable medium, 237
Separating effect, 447
Separating facilities, 537
Separating volume height, 453
Separation by liquid jets, 447
Separation diameter, 53
Separation flow, 165
Separation in cyclones, 430
Separation of dispersed phase particles, 457
Separation of gas–liquid mixtures in cyclones-classifiers, 442
Separation of heterogeneous system, 429
Separation zone, 32
Separator diameter, 455
Serviceability limits, 500
Shallow dimple, 18
Shear stress, 228
Shell-and-tube heat exchanging apparatus, 404
Side surface, 324
Similarity relation, 303
Simuni method, 125
Sine law, 107
Single-phase carrier, 1
Single-phase medium, 396
Sintered coating, 49
Sinusoidal law, 94
Size distribution, 50
Slip on the wall, 59
Slit channel, 86
Small disturbances, 25
Small-diameter jet, 107
Small-size source, 376
Smooth channel, 348
Smooth circular pipe, 4
Smooth equally spaced profile, 2
Smooth surface, 158
Smooth transition, 42
Smooth-pipe apparatus, 348
Solar concentrator, 471
Solar photoconverter, 471
Solar system, 471
Solid surface, 222
Solid-phase nuclear reactor, 105
Sound wave, 102
Source of additional flow turbulization, 10
Source of pressure loss, 177
Source of radiation, 330
Source of ultrasonic vibrations, 382
Source of volumetric heat release, 101
Space engineering, 384
Space exploration, 471
Space nuclear plant, 315
Spacecraft plant, 471
Special construction, 303
Specific power, 7
Spectral analysis, 422
Spectral distribution, 341
Spectrum of neutrons, 490
Spectrum of wave numbers, 277
Spherical dimple, 14
Spiral groove, 1
Sprayed coating, 51
Sputtered coating, 51
Stabilized regime, 298
Stable regime, 451
Staggered bundle, 18
Stagnant zone, 3
Starting and protection control system, 484
Stationary conditions, 106
Stationary flow conditions, 223
Stationary oscillations, 216
Stationary random process, 457
Stationary regime, 104
Steady-state conditions, 350
Steam condensation, 44
Stochastic analysis, 455
Stochastic attractor, 282
Stokes force, 458
Stokes law, 431
Stokesian model, 459
Stokesian resistance, 458
Straight pipe, 80
Straight smooth channel, 299
Strange attractor, 276
Strouhal number, 29
Structure of fuel assemblies, 101
Substance conservation equation, 208
Substance transfer equation, 189
Successive approximations method, 117
Supercritical regime, 289
Surface condensation, 49
Surface heat transfer, 157
Surface of equal flow rates, 177
Surface of revolution, 177
Surface roughness, 47
Surface tension force, 447
Surface tension gradient, 212
Surface tension, 42
Surface with coating, 52
Surface without coating, 53
Swift–Hoenerberg model, 276
Swirled flow, 337
Symmetric structure, 26
Symmetrical vortex, 81
System of air conditioning, 202
System of controlling, 335
System of coordinates, 170
System of equations, 101
System of heat supply, 404
System of honeycombs, 107
System of linear sources, 349
System of parallel channels, 107
System of water supply, 404
System with "white noise", 456
T

Tangential stress, 178
Tangential velocity component, 80
Tape twisting, 79
Tape with annular knurling, 91
Tape with screw knurling, 91
Technically smooth surface, 386
Technique of laser probing, 93
Technique of nondimensionalization of variables, 271
Technique of thermal design, 115
Technique of thermostatic control, 145
Technological process, 170
Temperature regime, 506
Temperature-sensitive element, 310
Test graphite reactor, 105
Test section, 2
Theoretical method, 101
Thermal conditions, 140
Thermal demineralization facilities, 522
Thermal engineering, 429
Thermal neutron reactor, 139
Thermal process, 9
Thermal resistance, 3
Thermal spectrum, 490
Thermal stress, 68
Thermoanemometric equation, 303
Thermoemissive plant, 471
Thermohydraulic calculation of a fuel assembly from the mean parameters, 509
Thermohydraulic efficiency, 31
Thermohydraulic process, 103
Thermohydrodynamic analogy, 299
Thermomechanical process, 517
Thermomechanical stress, 378
Thermophysical justification, 518
Thermostatically controlled surface, 380
Thickness of mixture film, 180
Thickness of salt deposition, 165
Thickness of the intermediate layer, 1
Thickness of the viscous sublayer, 1
Three-dimensional attractor, 97
Three-dimensional equation, 126
Three-dimensional twisted flow, 105
Three-dimensional vortex, 83
Three-start knurling, 7
Time-dependence technique, 102
Tornado effect, 41
Tornado-like jet, 24
Tornado-like structure, 25
Tornado-like vortex, 1
Total reactivity, 143
Transient boiling, 399
Transient process, 103
Transient regime, 61
Transition to tornado-like regime, 33
Transition to turbulent flow, 11
Transition zone, 317
Transverse protrusion, 13
Transverse velocity component, 335
Tray apparatus, 439
Tray of absorber and rectifying tower, 429
Tube of oval shape, 101
Tubular heat exchanger, 165
Turbulent flow conditions, 366
Turbulent flow structure, 101
Turbulent flow tube, 101
Turbulent flow, 335
Turbulent friction stress, 338
Turbulent heat transfer, 106
Turbulent regime, 25
Turbulization of flow, 1
Turbulized viscous medium, 456
Twisted channel, 336
Twisted fuel element for gas-cooled nuclear reactors, 514
Twisted fuel element, 85
Twisted jet, 25
Twisted pipe, 84
Twisted tape, 78
Twisted tube, 101
Twisting angle, 358
Twisting of fuel elements, 115
Two-, three-, four-layer model, 3
Two-blade profile, 105
Two-cellular structure, 33
Two-curvature surface, 31
Two-dimensional equation, 297
Two-dimensional roughness, 3
Two-parameter coating, 52
Two-phase medium, 67
Two-phase system, 430
Two-start knurling, 3
Two-temperature equation, 322
Two-temperature model, 102

U

Ultrahydrophobic surface, 59
Ultrasonic capillary effect, 382
Uniform distribution, 214
Uniform roughness, 3
Unit vector, 291
Unsteady-state thermal regime, 354
Use of liquid metal heat carriers for heat transfer enhancement, 380

V

Van-der-Pohl model, 276
Vapor film thickness, 93
Vapor generator, 476
Vapor jet, 410
Vapor–gas–liquid mixture, 430
Vapor-generating surface, 523
Vapor–liquid mixture, 67
Vector analysis, 260
Vector equation, 258
Vector of acceleration of body forces, 259
Vector of mass forces, 237
Vector of the azimuthal velocity, 25
Vector of the force of interphase interaction, 237
Velocity distribution, 184
Velocity gradient, 13
Viscous stress, 175
Void fraction, 394
Volume fraction, 398
Volumetric boiling, 517
Volumetric heat release, 101
Vortex generator, 10
Vortex jet, 27
Vortex structure, 16
Vortex zone, 2

W
Wall roughness, 47
Wall thickness, 45
Wall zone, 463
Wave number, 194
Wave structure, 189
Wavy regime, 198
Wavy surface, 184
Weak disturbances, 139
Weber number, 447
Wetted channel, 221
Wetted surface, 209
Wire diameter, 328
Working body reactivity, 484
Working body saving, 146
Working medium, 236
Working process, 488
Working section, 6
Working surface, 21
Working-body medium, 356

Y
Yaglom–Kader relation, 395

Z
Zone of deteriorated heat transfer, 317
Zone of film formation, 438
Zone of mixing, 327
Zone of stabilized heat transfer, 324
