

## SUBJECT INDEX

<b>Alternative power cycles</b>	
Kalina cycle	841
Ocean thermal energy conversion system with absorption and extraction processes	862
PVTx properties of NH <sub>3</sub> /H <sub>2</sub> O solutions	854
<b>Cycle Chemistry</b>	
Automated processing of analytical data for plant cycle monitoring	832
Boiler and turbine failures related to cycle chemistry	33
Boiler scale	
effect of water quality on boiler tube under AVP conditions	759
growth in oxygenated water treatment	744
optical, x-ray, and Raman spectra	744
Boiler-water treatment	33
for boiling-water reactors	48
for horizontal-type steam generators (VVERS)	48
for pressurized heavy-water reactors	48
for pressurized-water reactors	48
Deposition mechanisms in steam-cycle operation	767
novel deposition mechanisms	
flow electrification	767
turboelectric effects	767
Feedwater conditioning	33
Lead contamination in PWR steam-generators	783
lead migration in secondary circuit	783
lead removal from secondary circuit	783
Measurement of H <sub>2</sub> CO <sub>3</sub> in nuclear and fossil power plants	816
On-line chromatography	
use to measure ions in plant water cycle	775
use of data to control condensate demineralizer	775
Organic matter in CANDU-PHWR	
use of ion chromatography to analyze composition	824
composition in cooling water	824
composition in make-up water	824
Primary coolant technology for VVERS	
radiation dose level	791
water chemistry	791
Thermolysis of organic compounds	
influence on the distribution ratios of chlorides between water and steam	800
laboratory measurements on a NaCl organic acid system	800
Water treatment for utility boilers	
chemical standards	736
water conditioning	736
water purification	736
<b>Equations of State</b>	
Early IAPWS Formulations	xxv, 1
Industrial formulations	
IAPWS approved formulation	A-1
inverse equations	131, 161, 194, 202

modeling functions for PC use	214
new equations for compressed water	167, 175
new equation for superheated steam	179
proposed new formulations	123, 161
table look-up technique	149
Relationships of properties through the use of charts	139
Saturation temperature and pressure	
IAPWS approved formulation	A-143
new equations	186
Scientific formulations	
IAPWS approved formulations	
heavy water	A-88
ordinary water substance	A-71
proposed new formulation	66
Relationship of properties between scientific and industrial formulations	149
Use of Padé approximation	117

### **Formulations** (*see Equation of State*)

#### **High-temperature measurement techniques**

Conductivity measurements at high temperatures	432
Definition of pH in supercritical water	432
For monitoring in power plants	
hydrogen sensors	393
oxygen sensors	393
pH electrodes	393
Raman spectroscopy	393, 405
reference electrodes	393
Hydrogen electrode concentration cells	
acid-base equilibria	423
metal complexation	423
metal-ion hydrolysis	423
New high-temperature pH sensors	432
pH measurements using external pressure balanced reference electrodes	441
pH of dilute $\text{NH}_3/\text{H}_2\text{O}$ solutions	441
Raman spectra for salt solutions and mixed salt solutions	405

#### **High-temperature plants**

Clean coal technologies	
coal-gasification combined cycle	13
fluidized bed combustion	13
Gas turbines	13
High-frequency turbine generating system	416
Steam turbines	13

#### **Hydrothermal Reactions**

Chemical-free pulping	24
Coherent anti-Stokes Raman spectra	
$\text{N}_2$ in $\text{CH}_4$	617
$\text{N}_2$ in supercritical water (SCW)	617
pure $\text{N}_2$	617

Corrosion of construction materials	
in acids and H <sub>2</sub> O <sub>2</sub> in SCW	632
in acid and H <sub>2</sub> O	632
in supercritical water oxidation (SCWO)	638
Decomposition of organic compounds	24
Gasification of organic substances in SCW	24
Infrared spectra of thermolysis in	610
Kinetics of SCWO	
global kinetic models	581
detailed chemical kinetic models	581
Molecular dynamics simulation of solvation in SCW	595
Oxidation of chemical warfare agents in SCW	632
Oxidation of phenol	
changes with temperature	589
kinetics	589
Oxidation of propellants in SCW	632
PVT and phase equilibria in SCW by synthetic fluid inclusion technique	644
phase equilibria of H <sub>2</sub> O/NaCl/CO <sub>2</sub> system	644
Raman spectra of decomposition of ammonium nitrate in SCW	625
Raman spectra of flames in	617
Raman spectra of oxidation of low molecular weight alcohols in	660
Raman spectra of SCWO of methane	652
Reaction of Cl <sup>-</sup> with CH <sub>3</sub> Cl in SCW	595
Reaction of nitrates and nitrites with EDTA in	602
Salt solutions in SCWO	565
Thermolysis of guanidinium nitrate	610
Thermolysis of urea	610
<b>IAPWS, International Association for the Properties of Water and Steam</b>	
History	xxv, 1
<b>Molecular modeling</b>	
Aqueous electrolyte solutions at high temperatures	253
Aqueous non-electrolyte solutions at high temperatures	253
Dielectric properties at high temperatures and pressures	261
Phase diagram for supercooled water	355
Polarizable point charge model of water	229
Salts in steam	
ionic clusters and ionic solvation	489
ions in steam	489
Solubility of NaCl in steam and supercritical water	237
Solvation at infinite dilution	
solubility of methane in water	269
solubility of rare gases in water	269
Spatial distribution functions for oxygen atoms in water and amorphous ice	222
Supercritical water	
molecular dynamics simulations	245
Monte Carlo simulations	245

<b>Nucleation</b>	
Cloud chamber measurements at high temperatures and pressures	286
Cloud formation	
condensation nucleus activity spectrum	300
diffusion kinetic droplet-growth system	300
Maxwellian droplet-growth system	300
Concentration of NaOH in early condensate	730
measurements with rapid adiabatic expansion device	730
Condensation in transonic flow through a turbine cascade	711
Condensation of impure steam	
kinetic model of condensation	692
thermodynamic model of condensation	692
vapour sampling system	692
Data from a high-velocity humid-air wind tunnel	711
Droplet nucleation in expanding steam	
convergent-divergent nozzle test equipment	703
plant turbine measurements	703
Homogeneous nucleation of alcohols at high temperatures and pressures	286
Piston expansion tube measurements	
droplet growth	294
nucleation	294
nucleation of water vapor in air	294
Principle of minimum entropy production	278
Shock-tube condensation of argon/steam mixtures	278
Water chemistry in early stages of condensation	720
experimental early condensate sampler	720
<b>Properties of aqueous electrolyte solutions at high temperatures</b>	
Activity coefficients for salt solutions	533
Apparent molar and standard partial molar heat capacities of di- and tri-valent ions	511
Apparent molar and standard partial molar volumes of di- and tri-valent ions	511
Association constants of NaCl, NaOH, KOH solutions	518
Density of salt solutions from refractive index	
multicomponent solutions	573
NaNO <sub>3</sub> solutions	573
Electrical conductivity of NaCl, NaOH, KOH solutions	518
Excess thermodynamic properties for salt solutions	533
Isobaric heat capacities of KOH solutions	518
Isochoric heat capacities of KOH solutions	518
Isopiestic measurements method for high temperatures	533
Mass spectroscopic measurements	
of oxygen and hydration isotope partitioning between liquid and vapor	
pure water	505
salt solutions	505
Neutron diffraction with isotopic substitution at high temperatures	
hydration of Cl <sup>-</sup> in LiCl solutions	474
hydration of ions	460
structure of water	460
Osmotic coefficients for salt solutions	533
Partitioning of solutes between liquid and vapor in solutions containing	
Na/NH <sub>4</sub> /NH <sub>3</sub> /HCl	677
applications to geothermal systems and AVT	677

Phase diagrams of salts in supercritical water	
Prediction of distribution coefficients from dissociation constants	685
Properties of high-temperature solutions from ASPEN PLUS	
activity coefficients	497
solubility	497
Solubility of Na <sub>2</sub> SO <sub>4</sub> in NaCl/H <sub>2</sub> SO <sub>4</sub> /H <sub>2</sub> O systems (IAPWS Guidelines)	A-154
Solubility of simple apolar gases in heavy water substance (IAPWS Guidelines)	A-150
Solubility of simple apolar gases in ordinary water substance (IAPWS Guidelines)	A-150
Theoretical principles for classifying and developing binary and ternary phase diagrams	541
Thermal conductivity of solutions as a function of T, P, x	
CaCl <sub>2</sub> /H <sub>2</sub> O	549
MgCl <sub>2</sub> /H <sub>2</sub> O	549
Titration of ethylene diamine tetra-acetate (EDTA) in hydrogen-ion concentration cells	809
application to destruction of EDTA-metal complexes	809
Use of MULTEQ to predict thermodynamic properties	
liquid-liquid immiscibility in Na <sub>2</sub> B <sub>4</sub> O <sub>7</sub> solutions	669
NaCl activity coefficients at high concentration	669
volatility of HCl in steam	669
Velocity-of-sound measurements of KOH solutions	518
X-ray diffraction in sub- and super-critical water	474
<b>Properties of aqueous non-electrolyte solutions</b>	
Density of solutions	
water/ carbon dioxide	86
water/methane	86
water/nitrogen	86
Dew points of solutions	86
Incoherent quasi-elastic neutron scattering of polyethylene glycol/water	482
Modeling of PVTx properties of NH <sub>3</sub> /H <sub>2</sub> O solutions	854
Mutual diffusion coefficients of water/CO <sub>2</sub> solutions at high pressures	103
Neutron diffraction with isotope substitution of water alcohol systems	468
NMR measurements at high temperatures and pressures	
H <sub>2</sub> O and D <sub>2</sub> O in organic liquids	449
organic liquids in H <sub>2</sub> O and D <sub>2</sub> O	449
PVTx measurements of CO <sub>2</sub> /H <sub>2</sub> O solutions at supercritical conditions	
compressibility factors	558
molar volumes	558
Ultrasonic measurements on solutions of polyethylene glycol in water	482
<b>Properties of Water and Steam</b>	
Density (absolute) of water 0-85°C at standard pressure	78
Electrical conductivity of liquid and dense supercritical water (IAPWS Guideline)	A-160
NMR measurements at high temperatures and pressures for H <sub>2</sub> O, HDO, and D <sub>2</sub> O	441
Pressure along melting and sublimation curves for ordinary water substance (IAPWS approved formulation)	A-9
Refractive index of ordinary water substance (IAPWS approved formulation)	A-4
Specific heat at constant volume in the critical region	94

Static dielectric constant for water and steam	
IAPWS approved formulation	A-132
measurements 270K-370K	109
proposed new formulation	109
Surface Tension	
heavy water substance (IAPWS approved formulation)	A-103
ordinary water substance (IAPWS approved formulation)	A-139
Thermal conductivity	
heavy water substance (IAPWS approved formulation)	A-107
ordinary water substance (IAPWS approved formulation)	A-49
Thermodynamic properties	
IAPWS formulation for heavy water substance	A-88
IAPWS formulation for ordinary water substance	A-71
IAPWS skeleton tables for ordinary water substance	A-13
values of T, p, $\rho$ at critical point for ordinary and heavy water substance (IAPWS approved formulation)	A-101
Viscosity	
heavy water substance (IAPWS approved formulation)	A-107
ordinary water substance (IAPWS approved formulation)	A-49
<b>Supercooled Water</b>	
Application of wide-range equations of state to	378
Clathrate structure in	308
Entropy of glassy water and ice	347
Glassy solid forms of	347
Kinetic boundary for metastable states	378
Lattice models and limits of stability	363
Light-scattering measurements (Raman, Brillouin, Rayleigh) in	317
Neutron diffraction of low-density amorphous ice	325
Neutron scattering in D <sub>2</sub> O	
structure factors	332
pair correlation functions	332
Phase diagram from molecular modeling	355
Raman spectra at high pressures	386
Raman spectra of HDO	386
Random network models for	
phase diagrams	370
density maximum	370
stability limits	370
Second critical point interpretation of properties	339
Spinodal for	378
Stability limit interpretation of properties	339
<b>Supercritical Water (SCW) Solutions</b> ( <i>see Hydrothermal Reactions</i> )	
<b>Supercritical Water Oxidation (SCWO)</b> ( <i>see Hydrothermal Reactions</i> )
